

Electricity: from energy to cost - Plan

Electricity: from energy to cost — Grades 4–6

Duration: 20 minutes (adjust as needed)

Learning goal: Calculate an illustrative electricity-use cost and separate fixed charges.

Materials: Paper energy cards and an optional calculator.

1. Welcome / 3 minutes: Preview the goal and invite learners to watch, point, talk, use AAC or work on paper.
2. Model / 5 minutes: Use a fictional rate of \$0.20 per kWh. Explain kWh measures energy. Compare 10 kWh with 6 kWh for the same example period. Multiply by the rate, then add an unchanged \$5 fixed fee. Actual rates and savings vary. No real bills are needed.
3. Practise / 8 minutes: Explore the 2 worksheet questions together or independently. Allow extra time or skipping.
4. Reflect / 4 minutes: Ask learners to show one money choice and how they worked it out. Sharing is optional.

Adaptation: Offer cents instead of decimals. Never switch off medical devices, refrigerators, needed lights or temperature controls.
