

Water-saving model lab - Plan

Water-saving model lab — Grades 4–6

Duration: 20 minutes (adjust as needed)

Learning goal: Compare model water volumes and explain limits of estimates.

Materials: Two printed flow-rate cards and a calculator; no running taps.

1. Welcome / 3 minutes: Preview the goal and invite learners to watch, point, talk, use AAC or work on paper.
2. Model / 5 minutes: Pretend a tap uses 2 litres each minute. Compare running for 3 minutes with 1 minute. Discuss reporting leaks to an adult, not repairing them. Water savings do not always translate directly to bill savings.
3. Practise / 8 minutes: Explore the 2 worksheet questions together or independently. Allow extra time or skipping.
4. Reflect / 4 minutes: Ask learners to show one money choice and how they worked it out. Sharing is optional.

Adaptation: Use blue counters. Hygiene and drinking water are never restricted.
